

The premium grout for long-lasting and aesthetic results!

Ceresit CE 40 Aquastatic with **SILICA ACTIVE** technology is a flexible, watertight grout mortar for joints up to 8 mm:

- Excellent workability and performance (exceeds CG2 WA)
- For porcelain tiles, ceramic, glass, mosaic, natural stones and marble
- Suitable for indoor & outdoor
- Suitable for humid areas (showers, bathrooms, etc.)
- Also on critical & deformable substrates: heated floors, balconies, terraces & patios

Application areas / type of tiles:

With the new **SILICA ACTIVE** technology, Ceresit CE 40 now becomes perfect.

Superfine micro-silicates enhance the composition of the grout mortar, making it especially **stable and resistant**. **SILICA ACTIVE** technology creates an improved hexagonal micro-structure in the cement matrix which gives the mortar a higher density. Such a density results in a **higher compressive and flexural strength**.

The new Ceresit CE 40 is also more resistant to abrasion, due to the increased hardness of the surface. And the stabilized colour pigments embedded in the matrix lead to a **smooth and homogenous appearance**.

Thanks to a special inorganic matrix structure Ceresit CE 40 with **SILICA ACTIVE** features:

Optimised curing time – perfect for gres

Durable – increased crack and scratch resistance

Optimal colour stability and homogeneous surface

In addition to the **SILICA ACTIVE** technology, Ceresit CE 40 features the proven **Aquastatic** effect – water drops pearl-off the surface and do not penetrate into the grout. And of course, there is also the advanced „**Trio-Protection**“ against mold and fungi.

All in all – perfect for long-lasting and durable results!
